

Grade 4 Summer Math

Students entering grade 4 should be proficient in basic multiplication tables, 2-12. Having this skill mastered is an important foundation to other skills/concepts taught in 4th grade. There will be an assessment of basic facts the first week of school. The goal is to complete 60 facts in 2 minutes.

There are many websites that make learning fun such as:

www.prodigygame.com/play

www.splashmath.com/students

www.coolmath.com

Family Time:

Card games and board games will increase math strategies and number sense.

Please remember to incorporate math usage into everyday experiences such as, driving in the car: **distance and time**, cooking in the kitchen: **measurement**, shopping: **money**.

Talking about math and using math language will improve proficiency.

Have a nice summer!

Mrs. Noe
